Subject: Elk Hills emails

In thinking about it this this am, I am wondering if you could also look in your Lotus Notes Elk Hills files for anything about this aquifer exemption misunderstanding. As part of the public comment on the draft Class I permit we responded to a comment from CURE that indicated that the Class I wells were going to inject into the Tulare Formation in the Buena Vista field which was not correct at the time, and I wonder if you have anything in your emails in correspondence with DOGGR in which it was asserted that the formation was exempt. The wells are within the administrative boundaries of the field but not within either the shaded area of the map of the pool in Volume 1 or within the boundaries of the maps provided of the non hydrocarbon bearing zones included with the Primacy Application.

I wonder if there is anything in your emails about that?
